California Assembly District Travel Impacts, 2025p

This study, prepared for Visit California, documents the economic significance of the travel industry in California's eighty Assembly Districts. The estimates are generated from detailed calculations of county and regional travel impacts for the state of California prepared by Dean Runyan Associates [1]. Due to data limitations and methodological restrictions, reporting for Districts is necessarily at a higher level than for counties, but is otherwise directly comparable.

Interpretation of Impact Estimates

There are several issues that should be noted with respect to the interpretation of these findings:

- The **employment** (and earnings) estimates provided in this report refer to the *place of work* of all payroll employees and self-employed persons. The estimates reflect the number of jobs rather than the number of employed persons. Some of the employees in a particular Assembly District will be residents of another Assembly District. The extent to which this occurs in any given Assembly District is not estimated in this report. However, it is fair to say that this will occur to a much a greater extent in the many dense urban districts throughout the state as opposed to the geographically larger rural districts [2].
- The estimates of local and state **tax receipts** in this report also refer to the Assembly District where this tax revenue is generated (by point of sale, taxable income or property). The government entities that collect tax revenue are not necessarily contained within a given Assembly District. Therefore, revenue generated within one Assembly District may be used to provide services in another. This also is more likely to occur in dense urban districts.
- It should also be noted that the allocation of travel impacts is complicated by the fact that there is visitor travel between and among different geographic areas within the state. (For example, a visitor may stay overnight in a hotel in District X and shop in District Y.) In general, this is always an issue in travel impact research and is generally more evident with smaller geographic units such as dense urban districts.
- The Assembly Districts are described in this report with place names and corresponding counties. These descriptions are only intended to provide a general location of the district within the state. They do not purport to be the best or most accurate definition of the district.

1.California Travel Impacts, 2025p (April 2026) refers to preliminary 2025. The preliminary 2024 figure (2024p) has been revised to 2024. Prepared by Dean Runyan Associates for Visit California.

2.The 80 Assembly Districts each have a population of approximately 485,000. Rural Assembly Districts are typically comprised of many counties. California's many more numerous urban districts, on the other hand, typically comprise a small portion of one or more counties.

- District level estimates are breakouts of county level estimates based on factors such as room inventory and population by location within the county.

The report provides three summary tables for the eighty Assembly Districts, followed by a single page for each of the districts that provide all of the information contained in the summary tables. There are several appendices that describe the travel impact measures, methodology, and data sources.

2025 California Assembly District Travel Impacts

Assembly District		Spending ($000,000)			Earnings	Employ.	Tax Revenue ($000,000)		
		Total	Visitor	Other	($000,000)	(000)	Local	State	Total

Travel-generated employment	3.5%
Travel Percent of Total District Employment	8.8%

Travel-Generated Tax Revenue (2025p)

$100 of Visitor Spending Generates	
Local tax revenue	$4.70
State tax revenue	$2.90
Local & State Total	$7.60

Travel-Generated Tax Revenue per District Household	
Local tax revenue	$1,675
State tax revenue	$1,023
Local & State Total	$2,698

Note: Employment, earnings and state income taxes can include stimulus support.

Visitor Spending includes spending on lodging, food services, recreation, shopping, and local transportation. **Other Spending** includes ground transportation to other California destinations, resident air travel, travel arrangement services, and convention & trade show services. **Earnings** include wages and salaries, paid benefits and self-employment income. **Employment** includes all full- and part-time jobs for wage and salary employees, and the self-employed. The employment and earnings estimates are for place of work rather than the residence of the worker. **Local tax revenue** includes lodging and sales taxes imposed by cities, counties, and other regional tax jurisdictions in California. These taxes are levied on sales to visitors and the spending of employees attributable to travel industry earnings. Passenger facility charges attributable to visitors (a fee imposed on airline tickets) are included in districts with airports. Property tax payments attributable to travel industry businesses and employees are also included. **State tax revenue** includes sales, motor fuel, and business and personal income taxes imposed by the state of California. These taxes are levied on sales to visitors and the spending of employees attributable to travel industry earnings.

Summary of Methodology

Employment Characteristics

Assume that the District and the State have the following travel-generated and total employment. The calculations follow.

	Total	Travel
District	400	20
State	20,502	925

District Percent of Statewide Employment		
All Payroll & Self-employment	2.0%	= 400/20,502
Travel-generated employment	2.2%	= 20/925
Travel Percent of Total District Employment	5.0%	= 20/400

Visitor-Generated Tax Revenue

Assume that the District has the following visitor spending, tax revenue and resident households. (Note: Visitor-generated tax revenue is slightly less than the total tax revenue that is reported.) The calculations follow.

Visitor Spending (million)	$1,500
Local Tax Revenue	$35
State Tax Revenue	$70
Households	200,000

$100 of Visitor Spending Generates

Local tax revenue	$2.30	= ($35/$1,500)* 100
State tax revenue	$4.70	= ($70/$1,500)* 100
Local & State Total	$7.00	= $2.30 + $4.70

Visitor-Generated Tax Revenues per District Household

Local Tax Revenue	$175	= $35,000,000/200,000
State Tax Revenue	$350	= $70,000,000/200,000
Local & State Total	$525	= $175 + $350

Travel Impact Categories

Visitor Spending includes spending on lodging, food services, recreation, shopping and local transportation.

Other Spending includes ground transportation to other California destinations, resident air travel, travel arrangement services, and convention & trade show services.

Earnings include wages and salaries, paid benefits and self-employment income.

Employment includes all full- and part-time jobs for wage and salary employees and the self-employed. The employment and earnings estimates are for place of work rather than the residence of the worker.

Local tax revenue includes lodging and sales taxes imposed by cities, counties and other regional tax jurisdictions in California. These taxes are levied on sales to visitors and the spending of employees attributable to travel industry earnings. Passenger facility charges attributable to visitors (a fee imposed on airline tickets) are included in districts with airports. Property tax payments attributable to travel industry businesses and employees are also included.

State tax revenue includes sales, motor fuel, and business and personal income taxes imposed by the state of California. These taxes are levied on sales to visitors and the spending of employees attributable to travel industry earnings.

Summary of Methodology

The general method for estimating the economic impact of travel is described in the California Travel Impacts by County report [1]. The district estimates involved allocating the county level estimates to zip code areas and districts. The following data sources were used in making this allocation.

- Lodging establishment and room inventory by address prepared by STR, Inc.
- U.S. Bureau of the Census zip code Business Patterns for payroll employment by industry.
- U.S. Bureau of the Census 2020 housing characteristics, population, and resident employment characteristics by zip code.
- California State Senate Office of Demographics Senate and Assembly District zip code Directories [2]

District total employment (used for estimating the travel-generated employment share) was estimated from county and zip code payroll employment data and total employment (including payroll and self-employment) estimates for counties prepared by the Bureau of Economic Analysis.

Methodology Revisions

“Other Travel” has been revised for 2022-2024 due to a change in methodology needed to better estimate the economic impact within this category.
“Other Travel” consists of four separate estimates:

- Gasoline expenditures by visitors traveling between California destinations (counties & regions only).
- California resident use of airport facilities taking outbound flights.
- Convention and Tradeshow organizers
- *Travel Arrangement & Reservation Services (NAICS 5615)*

Historically, employment and wage data from the Bureau of Labor Statistics Quarterly Census of Employment and Wages (QCEW) were used to create estimates of business activity associated with Travel Arrangement & Reservation Services. The QCEW captures total wages as defined under state law, which encompasses a broad range of compensation beyond regular earnings. This can include bonuses, the value of stock options, severance pay, cash value of meals and lodging, tips and other gratuities. Employer contributions to certain deferred compensation plans may also be included.

Starting in 2022, reported wages for travel arrangement businesses in several California counties exhibited significant volatility that was inconsistent with employment levels and with the underlying trend in the industry. In certain counties, year-over-year wage figures diverged sharply from what employment headcounts alone would suggest, producing estimates that overstated economic activity attributable to industry operations.

To address this, the *updated methodology anchors Other Travel estimates to employment rather than total wages*. Where wages in a given county and year showed clear signs of distortion relative to their own historical trend, an adjusted wage rate derived from that county’s pre-distortion earnings history is applied in place of the reported figure. To reduce volatility in counties with non-disclosed data we decoupled from a broad state average to anchor towards the number of local business establishments. This approach results in producing estimates that better reflect industry conditions within each geography.

The restatement affects the years 2022 through 2024. Prior years are unaffected as the compensation volatility driving this adjustment was not present in the data before 2022. The revised series will be carried forward using the same methodology, with annual updates to be made as new data becomes available.
